Bathing water quality in the season of 2022

France

Under the provisions of the [Bathing Water Directive](#), about 22 thousand bathing waters are monitored in Europe each season. The monitoring data and other information regarding bathing water management are reported to the European Environment Agency by 29 reporting countries in Europe, to be assessed for the annual European report and more detailed national reports.

1. BWD reporting in the season of 2022

Bathing waters in the season 2022		Bathing water quality in the season of 2022	
Total reported	3370	Excellent	2558 (75.9%)
Coastal	2074	Good	479 (14.2%)
Inland	1296	Sufficient	131 (3.9%)
First identified in 2022	19	Poor	93 (2.8%)
Delisted in 2022	13	Not classified	109 (3.2%)
Total reported samples	34486		

The bathing waters are quality classified according to the two microbiological parameters (*Escherichia coli* and intestinal enterococci) defined in the Bathing Water Directive. 94.0% of all reported bathing waters (includes those that could not be quality classified due to lack of samples) are in line with the minimum quality standards of the Directive, thus classified “sufficient” or better.

2. BWD monitoring

Each bathing water that is identified by the reporting country needs to have a monitoring calendar established before the bathing season. The monitoring calendar requirements can be summarised as follows: (1) a pre-season sample is to be taken shortly before the start of each bathing season; (2) no fewer than four (alternatively, three for specific cases) samples are to be taken and analysed per bathing season; and (3) an interval between sampling dates never exceeds one month.

From the reported data, the assessment also designates effective implementation of the monitoring calendar (Table 1).

Table 1: Bathing waters in 2022 according to implementation of the monitoring calendar

	Count	Share of total [%]
Monitoring calendar implemented A bathing water satisfies monitoring calendar conditions listed above.	3203	95.0%
Monitoring calendar not implemented A bathing water does not satisfy monitoring calendar conditions listed above. It may be quality-classified if enough samples are available in the last assessment period.	167	5.0%

In addition to the monitoring calendar, management specifics of the last assessment period of four years are also assessed. The status primarily indicates whether the complete dataset of four seasons is available, but also points out the reasons as to why the bathing waters do not have the complete last assessment period dataset. The latter may indicate developing conditions at the site – most importantly, whether the bathing water has been newly identified within the period, or any changes have occurred that are likely to affect the classification of the bathing water.

Table 2: Management specifics in the last assessment period of 2019–2022

	Count	Share of total [%]
Continuously monitored A bathing water has been monitored in each bathing season of the last assessment period.	3214	95.4%
Newly identified A bathing water was identified for the first time within the last assessment period. Such status is assigned until four seasons of samples are available.	65	1.9%
Quality changes A bathing water was subject to changes described in BWD Art. 4.4 within the last assessment period. Such status is assigned until four seasons of samples, reported after quality changes, are available.	18	0.5%
Monitoring gap A bathing water was not monitored for at least one season in the last assessment period. No quality classification is made if not enough samples are reported for the most recent season.	73	2.2%

3. Bathing water quality

3.1 Coastal bathing waters

Coastal bathing waters are situated on the sea or transitional water coastline, with respective parameter thresholds defined in Annex I of the Directive. They are subject to more strict thresholds than the inland bathing waters. The quality trend is shown in Figure 1. Number of bathing waters by quality class for the last assessment period 2019–2022 is given in Annex I.

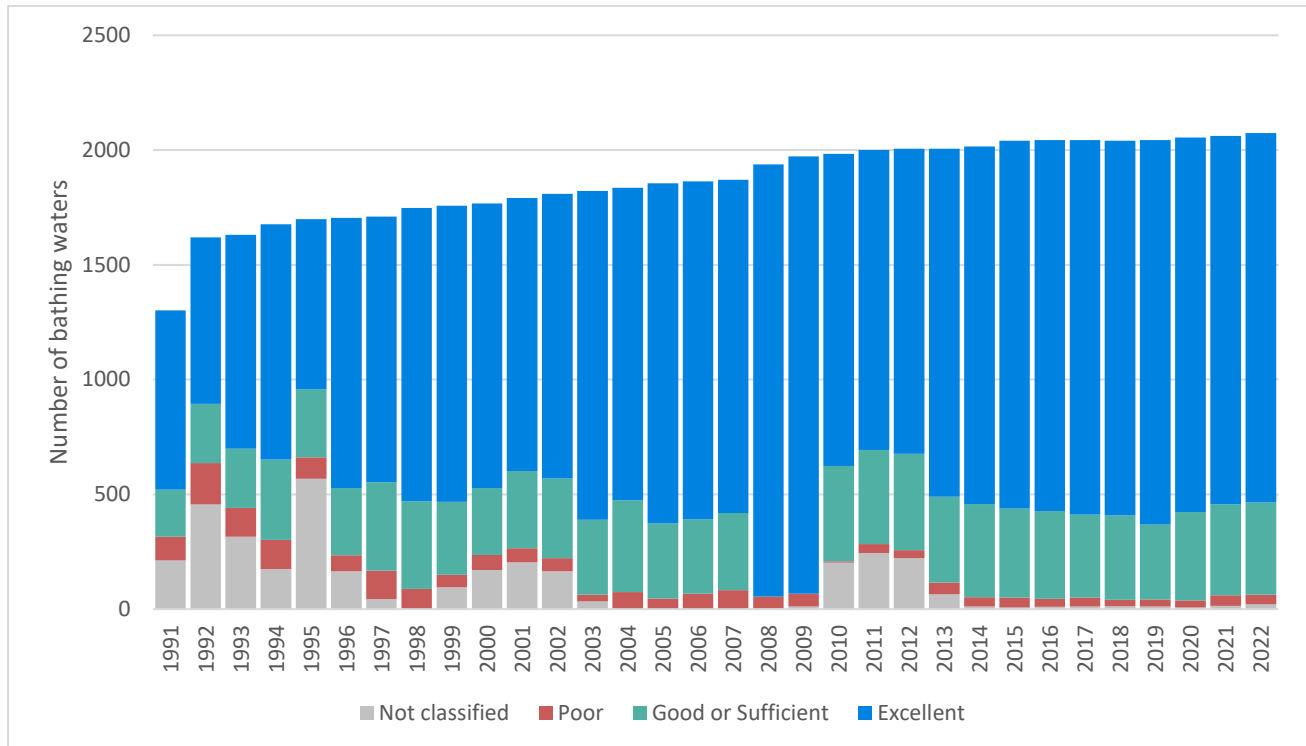

Figure 1: Trend of coastal bathing water quality. Notes: Each column represents an absolute number of bathing waters in the season. Quality classes “good” and “sufficient” are merged for comparability with the classification of the preceding Bathing Water Directive 76/160/EEC.

3.2 Inland bathing waters

Inland bathing waters are situated at rivers and lakes, featuring fresh water and with respective parameter thresholds defined in Annex I of the Directive. The quality trend is shown in Figure 2. Number of bathing waters by quality class for the last assessment period 2019–2022 is given in Annex I.

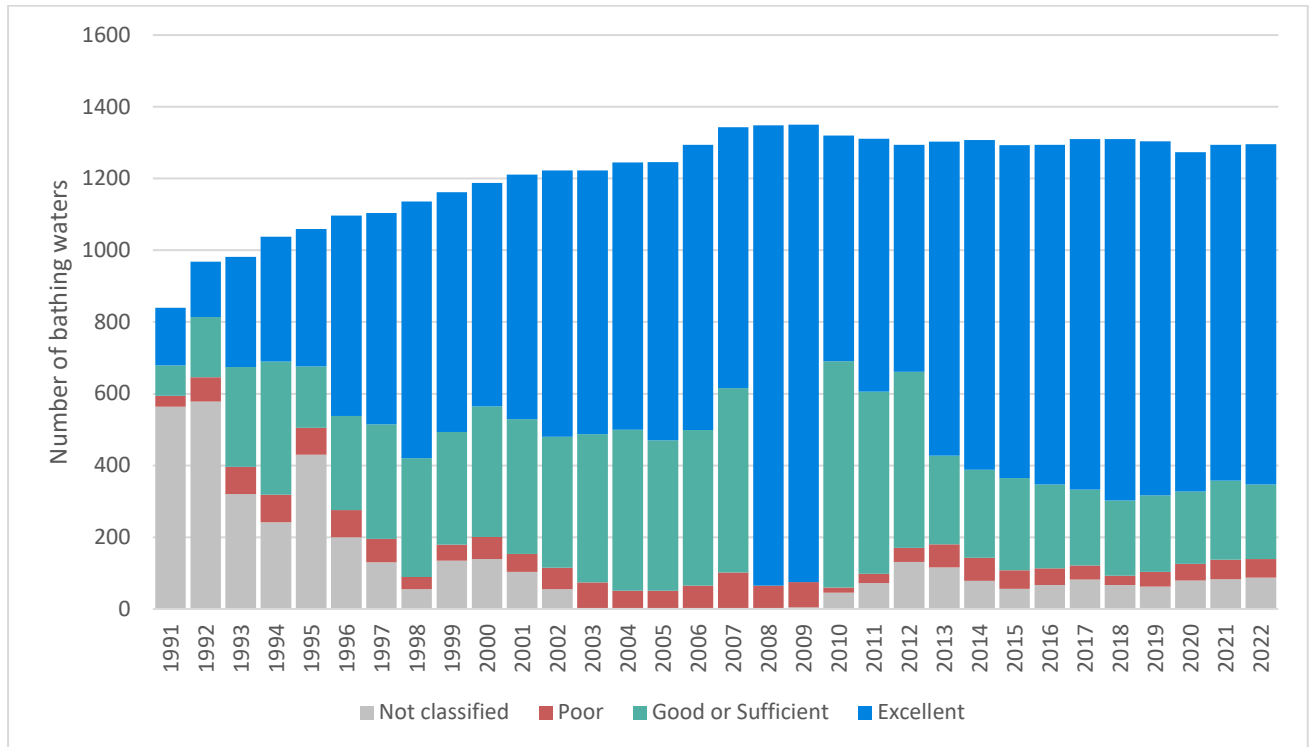

Figure 2: Trend of inland bathing water quality. Notes: Each column represents an absolute number of bathing waters in the season. Quality classes “good” and “sufficient” are merged for comparability with the classification of the preceding Bathing Water Directive 76/160/EEC.

Annex I Bathing water quality in 2019–2022

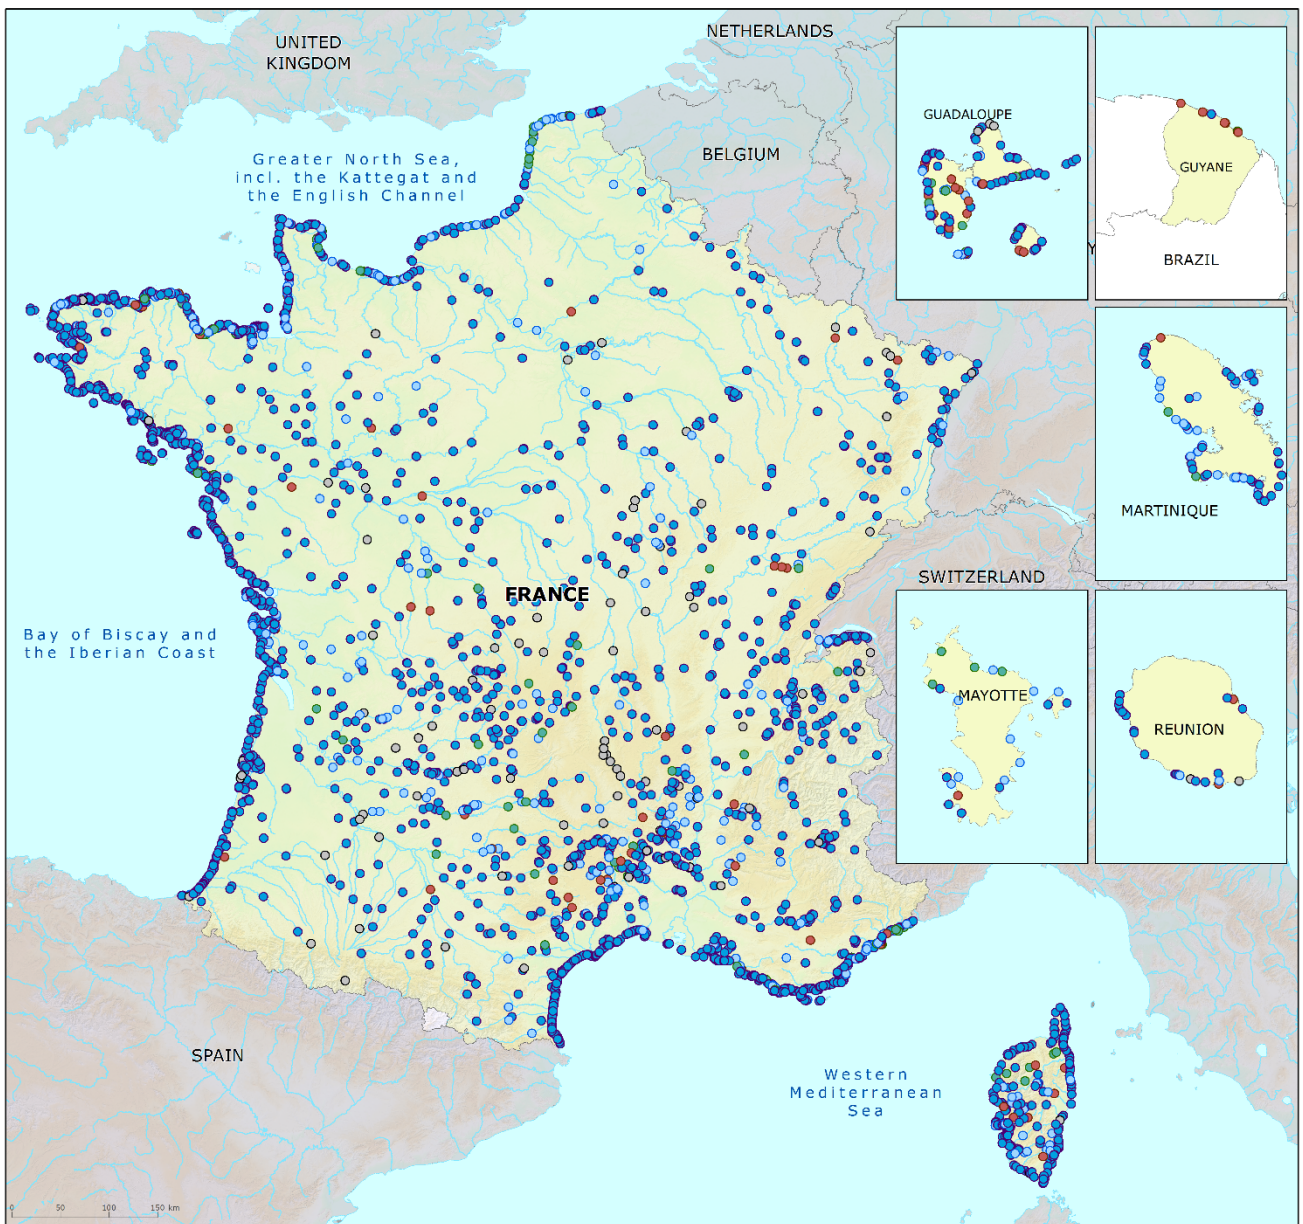

Table 3: Bathing water quality by water category and season

		Total number of bathing waters	Excellent		Good		Sufficient		Poor		Not classified	
			Count	%	Count	%	Count	%	Count	%	Count	%
Coastal	2019	2044	1675	81.9%	270	13.2%	57	2.8%	31	1.5%	11	0.5%
	2020	2055	1632	79.4%	311	15.1%	74	3.6%	31	1.5%	7	0.3%
	2021	2061	1604	77.8%	316	15.3%	81	3.9%	45	2.2%	15	0.7%
	2022	2074	1609	77.6%	307	14.8%	95	4.6%	41	2.0%	22	1.1%
Inland	2019	1304	987	75.7%	171	13.1%	43	3.3%	41	3.1%	62	4.8%
	2020	1273	946	74.3%	162	12.7%	39	3.1%	47	3.7%	79	6.2%
	2021	1294	936	72.3%	179	13.8%	42	3.2%	54	4.2%	83	6.4%
	2022	1296	949	73.2%	172	13.3%	36	2.8%	52	4.0%	87	6.7%
Total	2019	3348	2662	79.5%	441	13.2%	100	3.0%	72	2.2%	73	2.2%
	2020	3328	2578	77.5%	473	14.2%	113	3.4%	78	2.3%	86	2.6%
	2021	3355	2540	75.7%	495	14.8%	123	3.7%	99	3.0%	98	2.9%
	2022	3370	2558	75.9%	479	14.2%	131	3.9%	93	2.8%	109	3.2%

Note: Percentages may not total to 100 due to rounding.

Annex II Bathing water quality map

Map 1: Bathing waters reported during the 2022 bathing season in France

Bathing water quality

- Excellent water quality
- Good water quality
- Sufficient water quality
- Poor water quality
- Not classified
- No data
- Outside data coverage (data available, not presented on the map)
